

DISW × Salesforce: Capability Framework Discussion — Tara Jiranek | July 31, 2026

This canvas was generated using AI, which can produce inaccurate or harmful responses. Review for accuracy and safety before using.

Prepared for: Tara Jiranek, Head of IT Transformation — Siemens Digital Industries Software Account Team: @Drew Fisher · @Bill Schermer Date: July 31, 2026 | Weekly Sync — also applicable to Aug 12 DISW IT Leadership Session

Purpose of This Discussion

This canvas is a structured guide for exploring the full breadth of Salesforce capabilities — anchored in Tara's IT-as-a-value-center mandate, DISW's consolidation of shadow IT back under IT governance, and the platform opportunities ahead at Dreamforce '26.

It covers three interlocking questions:

1. How should DISW think about the Salesforce capability landscape?
2. Which capabilities are highest priority to understand before and at Dreamforce?
3. What team structure does DISW need to actually deliver Data 360 and Agentforce outcomes?

Part 1: How to Think About Salesforce Capabilities

The Framework: Three Layers of the Platform

Salesforce is not a CRM. It is an enterprise platform with three distinct layers — and DISW needs fluency in all three to consolidate shadow IT effectively.

Layer 1 — Engagement Layer (what users see and do): Sales Cloud, Service Cloud, Field Service, Experience Cloud, Commerce Cloud, Slack Layer 2 — Intelligence Layer (what makes work smarter): Agentforce (autonomous agents), Einstein AI (embedded/predictive), Analytics & Tableau, Einstein Conversation Insights Layer 3 — Platform & Data Foundation (what makes it all possible): Data 360 (Data Cloud), MuleSoft (integration), Headless 360 (agentic APIs), Einstein Trust Layer (governance), Shield (security)

The key reframe for Tara's team: shadow IT exists because the business couldn't see Layer 2 and Layer 3. IT's role is to make those layers visible, governed, and accessible to the business — not to block them.

The Shadow IT Consolidation Lens

For each business-initiated tool DISW has acquired outside IT governance, ask:

- Is there a native Salesforce capability that covers this use case?
- Can Data 360 unify data from this system without ETL (zero-copy)?
- Can MuleSoft Agent Fabric connect it as an agent action rather than a point-to-point API?
- Does the Einstein Trust Layer provide governance that the custom tool lacks?

This is how IT becomes the consolidation engine — not by saying "no," but by showing a better answer already licensed in the SELA.

The Capability Map — Full Reference

The spreadsheet below is the master reference for this discussion — organized by domain, with capability names, descriptions, and categorizations:

[DISW Salesforce Capability Reference Sheet](#)

Use the [Salesforce Architect Business Capability Map](#) as the visual companion — it maps the same capabilities to business domains.

Part 2: Priority Capabilities Before & At Dreamforce '26

DISW has 12 registered attendees at Dreamforce '26, including Tara herself. The sessions below are the highest-signal capabilities for Tara's team to understand before arriving — so they can engage the content and speakers with context.

Tier 1 — Core to DISW's Platform Strategy (Learn Now)

Capability	Why It Matters for DISW	DF'26 Session
Agentforce / Agentic AI	The platform direction for every cloud DISW uses. CPQ+ does NOT support Agentforce natively — this is the	Session 3973: Build Siemens Sales Agents With Agentforce Script

	reason ARM matters.	
Data 360 (Data Cloud One)	Unified customer profile, RAG grounding for agents, zero-copy from SAP/Snowflake. The AI context fabric. Already licensed in the Siemens SELA.	Session 5058: <i>Scale B2B Commerce Globally with Headless and Data 360</i>
Einstein Trust Layer	Zero data retention, PII masking, audit logging for every AI interaction. Required for EU AI Act compliance and Siemens' data governance obligations.	Covered in all Agentforce architecture sessions
Headless 360 / MCP	Salesforce as the universal AI engine for any surface – SiePortal, a Teams bot, a mobile app. MCP Server now in Beta with ~100 skills.	Session 5058 + Agentic Architecture
MuleSoft Agent Fabric	The integration nervous system for agent actions – connects SAP, external APIs, and enterprise systems to Agentforce without point-to-point APIs.	Session 4142: <i>Agentic Architecture</i>

Tier 2 – Strategic Enablement (Learn At or After Dreamforce)

Capability	Why It Matters for DISW	DF'26 Session
Agentforce for Revenue Management (ARM)	Already purchased in the Siemens SELA. Pilot about to start. The AI revenue platform that CPQ+ cannot be.	Session 3969: <i>How Siemens is Shaping the Future of CPQ with Agents</i>
Slack Enterprise Grid + Agentforce in Slack	The IT consolidation play – Agentforce agents deployed in the collaboration surface where work happens. Change management framing for Patrick & Tara's org.	Session: <i>Boosting Productivity with the Siemens Employee Agent</i>
Tableau Pulse / Proactive Analytics	Push-based metric monitoring – IT demonstrates value to business leaders without requiring them to build reports.	Covered in Analytics sessions
Einstein Conversation Insights (ECI)	AI analysis of sales call transcripts – coaching signals, deal risk, competitive mentions. Directly relevant to DISW's sales ops team.	Session 4280: <i>From siemens.com to Pipeline: The Autonomous SDR Agent</i>
Experience Cloud + Partner Community	Self-service portal for 14,000+ partners – Siemens already piloting Agentforce on Experience Cloud for partner onboarding.	Session 5048: <i>Scaling Intelligent Partner Ecosystems on Agentforce</i>

Tier 3 – Platform Governance (Critical for IT Architecture Role)

Capability	Why It Matters for DISW
Multi-Org / Data Space Architecture	The Companion Org vs. Home Org challenge DISW has been navigating. Data Spaces in Data Cloud One are the answer – IT must own this architecture decision.
Shield & Data Governance	Field-level security, event monitoring, encryption – the governance layer that enterprise IT requires before agentic AI goes to production.
Flex Credit Consumption Management	Consumption-based AI credits managed centrally via Siemens AG SELA. IT needs to govern allocation across DISW business units to prevent ungoverned spend.
Agentforce Analytics & Observability	Now unmetered on Data 360 (as of July 13, 2026) – IT can demonstrate ROI, monitor agent health, and govern behavior with real-time dashboards. No additional credit cost.

Part 3: The Team DISW Needs to Deliver Data 360 + Agentforce

This is the most important strategic conversation beyond capabilities. The question isn't "what can Salesforce do?" – it's "who does DISW need to hire or develop to make it real?"

The framework below was developed directly from Salesforce's Data 360 implementation guidance, validated at scale with enterprise customers.

Required Roles for Data 360 + Agentforce at Enterprise Scale

Role	Primary Responsibilities	DISW Implication
Executive Sponsor / CDO	Defines data strategy, signs off on governance, aligns senior leadership. In some companies, this is the Chief Data Officer.	Andrew Allan (CIO) is the natural sponsor. The question is whether a CDO-level voice exists or is needed within DISW IT.
Enterprise / Data Architect	Owns the overall data strategy and Data 360 integration within DISW's technology landscape. Performs data quality assessments. Advises on the Data Cloud One architecture (Data Spaces, Home Org vs. Companion Org).	This is the most critical gap. The Companion Org issues stem from an absence of a senior EA who owns the D360 architecture end-to-end.
Solution / Technical Architect	Leads use case identification and refinement, hands-on Data 360 configuration, connectivity to SAP and source systems. Post-implementation, identifies additional use cases and maintains connectivity.	DISW has Salesforce admins and developers – this is a distinct seniority level that bridges business and platform architecture.
Business Analyst	Ensures Data 360 and Agentforce solutions align with actual business needs. Advises on how to activate insights within existing workflows. Writes PRDs that Vibe Coding tools can consume.	This role is the <i>link between IT governance and the business units that previously created shadow IT.</i>
Project Manager	Manages resource availability, coordinates between IT, business, and Salesforce teams.	Standard – Tara's org likely has this; key is PM experience with platform/data projects.
Developers + Data Engineers	Build custom applications and integrations, implement and manage data pipelines for efficient data collection and processing.	DISW has developers but likely needs upskilling on Agentforce Agent Script, Apex Actions, and MuleSoft Agentic Flows. Vibe Coding significantly accelerates this.
Application Administrators	Platform configurations, data models, access permissions, UI layouts, data management controls.	Kristina Graham's team – already engaged. Key upskill needed on Data 360 data model configuration and agent governance.
QA / Testing Lead	Leads UAT and unit testing for go-live. At agent scale: Agentforce Scorers (GA July 2026) allow automated evaluation of agent response quality – a new capability this role must own.	Agents fail differently than Apex. Probabilistic failure surfaces require new testing approaches beyond unit tests.
IT & Security	Data access controls, encryption, GDPR/EU AI Act compliance, field-level security. Should be involved throughout implementation – not just at go-live.	Bob Schmidt's team. Especially critical given Siemens' global data residency and EU AI Act exposure.

The Org Design Conversation

Tara's goal: IT as a value center, not shadow IT in the business. **The structural answer:** The EA and Solution Architect roles above are what transform IT from an order-taker to a platform architect. Without them, business units will continue building outside IT governance – not because they want to circumvent IT, but because IT can't respond at the speed and depth the business requires.

The roles that DISW is most likely missing (or has at insufficient seniority):

- 1. **Enterprise / Data Architect** with specific Data 360 and multi-org expertise
- 2. **Business Analyst** who sits between IT and the business GTM teams (not just within IT)
- 3. **QA Lead** who understands agentic AI testing patterns (Scorers, red-teaming, guardrail validation)

Siemens Proof Points – You Are Not Alone

Other Siemens divisions are already live. DISW doesn't need to figure this out from scratch.

- **Siemens SieSales (AG):** Multi-agent lead qualification system – ~500 inbound B2B leads/day, 11% engagement rate, 100% response rate, 87% CSAT. [Published customer story.](#)
- **Siemens Energy Gas Services:** Agentforce Service Agent for customer technical support – live in production since January 2026.
- **Siemens AG / SiePortal:** Headless 360 commerce on Agentforce – 1.3M customers, 70+ regions, the largest B2B Salesforce Commerce implementation ever. Speaking at Dreamforce (Session 5058).
- **Siemens Energy 3-Day Hackathon (Berlin):** 45 participants, 3 POCs across Customer Self-Service, Human Agent Augmentation, and Customer 360. Combined estimated business value: \$5M+.

Dreamforce '26 – DISW Registered Attendees

Tara and her team have a strong presence. Key sessions to pre-brief before attending:

Name	Title	Priority Sessions
Tara Jiranek	Head of IT Transformation	4142 Agentic Architecture, 5058 Headless + Data 360
Patrick Sluck	Senior Leader, Salesforce Platform & Support Transformation	3973 Build Sales Agents, 3969 CPQ with Agents
Kristina Graham	Head of Salesforce Admin & Release Management	Agentforce for Admins, Observability
Jon Peterson	Senior Director, Digital Commerce and Operations	5058 Commerce + Data 360
Andrew Allan	CIO / Chief of Global Finance Operations & Technology	Exec Summit track
Missy Moreland-Bowers	VP FINOps Strategy & Transformation	Revenue Intelligence, Analytics
Lane Giles	Customer Support	Agentforce for Service, ECI
Susan Kacapyr	Senior Manager, IT Applications Development	Vibe Coding, Agent Builder

Suggested Next Steps

- ☐ Tara to identify who at DISW currently covers the Enterprise Architect + Data Architect roles – and whether that person has Data 360 expertise
- ☐ Drew + Bill to share Trailhead pre-work for DF'26 attendees (Agentforce, Data 360, Headless 360 trails)
- ☐ Discuss Data Space governance architecture to resolve the Companion Org situation before Dreamforce
- ☐ Align on whether the Aug 12 session with IT leadership should include the org/team design conversation or keep it technical
- ☐ Tara to nominate additional IT team members for DF'26 registration if any remain
